

RAPTOR COMMAND

THE HEAVY METAL TRIBUTE TO ELON MUSK

In the past quarter century, there have been 6 main areas which would potentially have a profound effect on the future of humanity. Those areas have been: the internet, humanity becoming a multi-planet species, sustainable energy (consumption and production), artificial intelligence, genetics and heavy metal music.

Raptor Command's mission is to raise awareness of and promote Elon Musk's futurist ideas and visions for the future of humanity through the medium of heavy metal music and subculture. The band is comprised of seasoned metal musicians who share a passion for technological advancement and Musk's tireless efforts to push mankind into a bright, triumphant future. The band has just released its first single, "Elon: Champion for Humanity", available now on iTunes, Amazon.com, Spotify and all major digital music outlets.

"Much like the Tesla batteries, this music continuously builds energy as if it were magically pulled from the ether. Faster than a Model S, and more explosive than a SpaceX rocket - this metal is truly something that will launch us into the future!" – Ty Christian (Lead Vocals)

"I think of the band as a philanthropic endeavor. All of Elon's ideas... sustainable energy, space exploration, improving transport... the world will be better off if more and more people embrace and support these ideas. We want to help

achieve that through the power of metal." – Max Carlisle (Keyboard and Guitar)
